# Savings & Security

We know you need the right product selection, the right prices and the right support. So before you make your choice, please take a couple of moments to understand why Jameco is the only major electronics distributor to provide you a **real choice**. Jameco offers **both** comparable-quality **generic**

**brands**, typically priced 20-30% below name brands for great savings, **and** well-established major **name-brand** products for those companies or individuals that want the added security of buying major brands. All are guaranteed to be at the **lowest prices**.

## Savings

First of all, we offer our no-nonsense **low-price guarantee** for just one reason. We're dedicated to saving you money on your electronic components purchases!

To help you save even more, we source equivalent products with the same form, fit and function of well-known brands. These comparable-quality money-saving generic brands are offered at substantially reduced prices; typically **20-30% below** name brands.

Low Price Guarantee?  
Name Brand Security?  
Generics at 20-30% Less?  
Exclusively at Jameco?

With 30+ years of experience, Jameco has developed strong alliances and partnerships with economical, high-quality suppliers. As a result, we offer products with our own name on them! Our exclusive lines of Jameco **ValuePro™** and **ReliaPro™** products carry our name for just one reason, we stand behind them!

## Security

Jameco also offers hundreds of well-established major name-brand manufacturers to provide you added security. So whether you need a Linear Tech® IC or a Bourns® multi-turn potentiometer, you can be sure we supply the products you use most often.

Jameco also offers hundreds of well-established major name-brand manufacturers to provide you added security. So whether you need a Linear

Most of these manufacturers will likely appear on your AVL, so you can rest assured that we're able to meet your corporate buying requirements when the security of a specific brand is required.

Jameco has been offering electronic components since the mid 1970's. And while we're not the oldest distributor, we have developed a unique mix of product sources, allowing us to bring you the quality products you need from sources other distributors only wish they could depend on.

## Real Choice — Real Value

So rather than offering multiple choices of a single class of major **name brands**, all at about the same price, Jameco offers you a real choice unavailable from other distributors. A choice of name-brand

products at below-market prices and Jameco **generic brands** at even greater savings. A **real choice**, guaranteed savings and security in every purchase... **only at Jameco!**

## Low Price Guarantee

You've seen it many times. The Lowest Prices, Guaranteed! At Jameco, our price guarantee is simple. If you find a lower print-advertised price for a product we offer, just let us know. We'll offer you that product for 10% less than the price you found, right down to our cost!

No asterisks. No footnotes. Just a simple, straight-forward guarantee. We guarantee it because we take our pricing seriously. We guarantee it because we offer the lowest prices. And we guarantee it because we know how important costs are in the success of many projects. Wouldn't you prefer the protection of the guarantee no other major electronic components distributor offers?

# Over 10 Times the Selection at [www.Jameco.com](http://www.Jameco.com)

As discussed on the previous page, we are excited to exclusively offer our customers a choice between Jameco **generic brands** and major **name-brand** manufacturers. Our Product Marketing team constantly refines their product focus to meet your evolving needs.

Our catalog only presents a small sampling of the overall product selection we offer. Quite literally, you'll find over **10 times the selection on our web site**. For example, we recently added tens of thousands of products in the following categories:

## Expanded Product Categories

Amplifiers	Data Conversion	Lighting	RF ICs
Analog/Linear	Diodes	Magnetic	RF Connectors
Board-to-board	Discrete	Memory	Sensors
Connectors	Embedded Processing	Opto	Switches
Capacitors	Fans	Peripheral	Thermal Management

Don't see a manufacturer you need in this catalog? Chances are we have it on our web site at [www.Jameco.com](http://www.Jameco.com). And if you still can't find something, drop a note with specifics to our Product Management team at [NewProducts@Jameco.com](mailto:NewProducts@Jameco.com).

## Now — Enhanced Web Performance!

In the last few months, we significantly improved the performance and reliability of our web site. We revamped the internet pipes entering our buildings, upgraded servers and upgraded IBM Websphere middleware to accommodate much greater traffic and improve overall performance. Our new firewall appliances provide greater throughput and external email monitoring now reduces spam traffic by several magnitudes. All this behind-the-scenes stuff translates to a much faster response and greater reliability for you, our customer.

The screenshot shows the Jameco website interface. At the top, there's a navigation bar with links like 'Home', 'About Us', 'Contact Us', 'FAQ', 'Privacy Policy', 'Terms of Sale', 'Site Map', and 'Search'. Below this is a search bar and a list of product categories. The main content area displays a table of products with columns for 'Part Number', 'Description', 'Price', and 'Availability'. The table lists various electronic components like resistors, capacitors, and diodes.

In addition to better performance, we've loaded tons of new product information. You'll find millions of parametric data specs added to our new platform, so you can more easily find the products best suited to your requirements. We've even added more specific part descriptions to help you find the products you're looking for faster. Plus, we're also in the process of greatly expanding the amount of data sheets and app notes you'll find on the site.

And with all this new information, you can expect to see even greater functional improvements to the web site in the weeks and months to come. So be sure to visit our site frequently and take advantage of all the new features!!

## Fiber Optic Transceivers

The HFBR-5701 (IEEE802.3 1000BASE-SX / fiber channel) / 5710 (IEEE802.3 1000BASE-SX) are optical transceivers that are compliant with the specifications set forth in the IEEE802.3 (100BASE-SX), fiber channel (100-M5-SN-1, 100-M6-SN-1), and the small form factor pluggable (SFP). Its primary application is servicing Gigabit Ethernet and fiber channel links between optical networking equipment. The HBCU-5710R electrical transceiver offers full duplex throughput of 1000 Mb/s by transporting data over shielded and unshielded twisted pair category 5 cable with 5-level PAM (Pulse Amplitude Modulation) signals. The 1000BASE-T module takes signals from both the twisted pair category 5 cable and the SerDes interface.

## 2-150mA LED Tester

Pocket-size LED tester makes it easy to check functionality, color, brightness and uniformity. Plug any leaded LED into one of the 13 positions on the tester at current ratings ranging from 2-30mA. Another 13 positions strip ranging from 20mA to 150mA to test other types of LEDs.

Part No.	Description	Size (L x W x H)	Price
355805	LED tester	3.1" x 2.2" x 0.9"	\$9.69

## Why Test It?

With the huge MTBF of LEDs, you might wonder why we offer an LED tester in the first place.

Why, you ask? After talking to a few friends, I found some like to clip their leads before inserting the LEDs into a board. And when you have mid 30's or 40's eyesight and you've been staring at the computer screen too often, you can't always depend on feeling the detent to determine polarity. Consider the tester above if you need assistance too!

## Resettable Fuses

Resettable fuses improve reliability and lower costs. Polymer Positive Temperature Coefficient (PPTC) fuses have provided designers in numerous industries a new tool in their battle to improve product quality and performance. As PPTC fuses are resettable, warranty costs and service calls are largely avoided.

## Finding the Needle in the Haystack

Remember the adage about doing it right the first time? If you try to take short-cuts, particularly with mechanical connections, the consequences can far outweigh the initial time savings.

So when you're crimping cables, and especially when you're crimping coax, make sure you use the right crimping tool! All it takes is one intermittent connection and you'll use all the time you ever saved, plus a whole lot more! (I'd prefer to find the needle in a haystack!) Make sure you invest now – it's not worth the cost later.

## Insulkrimp® Solderless Terminal

### Female Quick Disconnect

- Designed for dense packaging requirements; the profile height is lower than other competing products on the market
- Translucent "see-through" insulator provides fast, on-line quality control inspection by allowing a quick visual check of the wire/terminal assembly
- Terminal's funnel entrance is designed for increased crimping rates by speeding wire delivery into the crimp section and eliminating wire strand fold back
- A wire stop stamped into the crimp barrel prevents insertion of over-stripped wires
- Material: brass • PVC insulation

## Avikrimp® Solderless Terminal

### Male Quick Disconnect

The Avikrimp® version of the fully insulated quick disconnects gives you the extra advantage of the secure metal support sleeve. This part fulfills the double crimp (support) requirements of VDE and other DIN specifications.

## Versakrimp™ Solderless Terminal

### Ring Tongue

When the butted seam Krimptite barrel is bonded with a special brazing alloy, it becomes a Versakrimp barrel. This brazed-seam barrel terminal and splice will not open under conditions of stress or wire pull. As versatile as it is tough, it can be crimped under most adverse conditions by many types of tooling. The Versakrimp is ideal for hard-to-crimp solid and stranded wires.

### Steps Aside, You Can Save!

Designers today are forced to face many obstacles that didn't exist 10 - 20 years ago. Power-saving stand-by and sleep modes were necessary for flight equipment, but not nearly as common in traditional embedded systems.

Motors are now more efficient and produce significantly more torque/power per Watt consumed. But we still must balance power supply limitations with torque and precision requirements.

While not always considered as elegant as direct drive, gear-reduced power trains are often quite advantageous. Positioning accuracy can be improved to finer increments by simply changing the gear ratio. Torque will also improve based on the gear ratio. And since a smaller, less powerful motor can be used, power requirements are also reduced. You'll use less expensive motors and power supplies, plus you'll reduce heat dissipation.

## Localize Your Power

When you're thinking about powering your creation, consider the use of a localized DC-to-DC converter. These devices are great for odd voltages and relatively low current requirements. Plus, you'll have less noise without the leads connecting to the power supply.

## XBOB-NC Video Text Module

XBOB integrates Decade's third-generation OSD technology into a convenient plug & play format. The command set is nearly identical to that of the popular BOB-3 module and XBOB includes all of the optional circuitry described in the BOB-3 Application Guide. XBOB lets your PC display up to 680 characters on standard video monitors and TV sets. With 63 user-definable character patterns, XBOB supports pseudo-graphics and multiple languages. XBOB generates video on-board, or automatically genlocks to your video source and superimposes characters over the image. Printable characters and commands control XBOB through a fast RS-232 data link, much like a simple serial printer.

- Higher display density; 40x17 characters (680 max.)
- Horizontal (1 line) and vertical smooth scrolling (up to 16 lines)
- Stand-alone operation, for simple source ID or fixed reticle applications
- Improved automatic video mode control

## Don't Get Caught without One!

DMM's are so inexpensive today that we should never be caught without one. While many of us generally need a highly-accurate, full-function multimeter for some testing, often a basic low-cost device will get the job done.

In lab situations, I find that having a DMM dedicated to each work area is most effective. A few associates reduce pilfering by assigning locked tool cabinets to each lab and lead. Others use holsters to keep secondary devices with them at all times.

Whatever works best for your situation, just be sure to equip your team and yourself for maximum efficiency. It's a small cost for a relatively reasonable productivity gain.

## When to Mix Apples & Oranges

Clearly we know that DIP sockets were devised for DIP semiconductors and SMT semis mount straight onto the PCB. We also know that prototyping SMT devices is much more difficult than DIP because of the package.

So how do you make prototyping SMT-only products much faster and easier? Just use a DIP socket! No, I'm not writing crazy talk... check out the Bellin Dynamic Systems SMT proto boards, above. Simply solder your devices to these carrier boards once. The DIP pins on the underside plug into your DIP sockets, so you can plug and exchange them like lego building blocks and then reuse them in future prototyping endeavors.

## MONDO•TRONICS

## Flexinol Muscle Wires®

These unique nickel-titanium alloy Muscle Wires® actually shorten in length when electrically powered, and can lift thousands of times their own weight.

**How it works...** Pressing the switch lets power flow from the batteries through the Muscle Wire®, heating it and causing it to contract, raise the lever and lift the weight. When power is removed, the Muscle Wire® cools and relaxes, and the weight helps it return to its starting position.

- Length: 1 meter
- Includes: Crimps and instructions
